**My Open Manifesto** by Ray Dela Rama [raymond.delarama55@gmail.com] October 10, 2026

**Introduction**

I am writing this for myself first, driven by a vision of the future that I'm committed to making real. I aim to build fast, but never faster than the foundation can carry, such that the foundation will be strengthened before each new weight arrives.

Vision: A world order where society advances through high-quality products and services — built strictly on moral good (like honesty, consent, fairness, kindness, and respect), never on moral evil (like deception, exploitation, coercion, theft, or violence).

Thesis: Under the premise that every identified failure mode is eventually solved, this system is better for the whole world and for everyone because the system removes large categories of real harm, redirects effort toward genuine value creation, preserves voluntary choice, and accommodates residual preferences without letting them impose costs on others.

I have no achievements online that prove I am fit to work on making this vision a reality. But a key framework I apply to all my work is to observe what people far ahead of me are doing, take what's useful, discard the rest, and add something of my own.

I'm determined to make this work, alongside trusted individuals who share the vision and have the skills and motivation to work on it. I am sharing my plans openly to attract capable leaders with an extraordinary sense of responsibility, strong ambition, relentless curiosity, and a genuine concern for where this work leads. I'm not looking for people to manage: I expect every leader to manage themselves and lead through their own work.

For myself, I don't value money, fame, status, power, or other social markers for their own sake. I value them only as tools, for making this vision real and for the people I care about and work with, if they want them. Tools can be used for moral good or moral evil, and I will use them only for moral good.

More broadly, I'll do everything I need, using only morally good means, to make this vision real and prevent total failure, but never at the cost of who I want to be or the boundaries I've set for my own life. Total failure only means that our operations are completely shut down and no one is left able to continue them. It could come from illegitimate interventions or from circumstances nobody caused on purpose. Illegitimate interventions are those that rely on moral evil, unlike rules that are open and apply to everyone.

Our aim is to build something better than the current world order, starting small and proving each step, until enough people see for themselves that it is better and choose it. That is how it becomes the new standard the world holds itself to. Many of history's most lasting changes came from people choosing something better, not from force. As the vision comes to reality, I wish for everybody to easily find a place in their life where they can live and work in their zone of genius and in what makes them truly happy without worrying about money, fame, status, or other social markers.

Let's focus on the work that leads to the vision.

**What's the rough plan?**

We're building many durable interconnected local trade unions that exchange high-quality products and services only on moral good, that work better for the people inside them, and stay open for anyone who chooses to join.

The vision is a world order where society advances through high-quality products and services — built strictly on moral good (like honesty, consent, fairness, kindness, and respect), never on moral evil (like deception, exploitation, coercion, theft, or violence).

This vision is the core. Every pillar, every partnership, and every decision, no matter how small or how urgent, must be true to the vision. Where a choice would make things faster but would require moral evil, even against a single person or AI, the vision comes first.

The vision also has to outlast anyone working on it, including me. No part of this plan should ever depend on one leader, one company, one protocol, or one individual continuing to lead or exist.

I don't have the right knowledge to build every part myself. I'm just laying out the thoughts I have now, and I'll let others lead who have more proven knowledge and results.

**To keep the work honest and durable, everything has to satisfy a few irreducible constraints.**

- Value has to be produced and exchanged voluntarily — coercion and deception are off the table by definition, so the only real engine is products and services people actually prefer because the outcomes are better for them.

- Trust is local and expensive. Large-scale coordination without local knowledge and repeated interaction tends to collapse into free-riding or hidden moral evil. Global ledgers and shared standards can amplify local trust; they cannot create it.

- Incentives dominate behavior. If moral evil still yields higher private returns inside or outside the system, it will happen. The design itself — transparency of standing, reputation costs, closed trade unions that start with real mutual need, and clear exit rights — has to make moral good the higher-return path.

- Money and credit are tools for coordination, not ends in themselves. Changing the global monetary order is useful only when it lowers the cost of honest, consensual exchange. Pure replacement is extremely hard because of network effects and incumbent power; complementary systems that demonstrably outperform on working capital and quality have a better chance.

- There can be no single point of failure, including people. Anything that depends on one leader, one company, or one fixed definition of the standard will eventually be captured or fail. Durability needs open protocols, local voting on standards, portable reputation, and distributed competence.

- Legal and physical reality still exists. States keep the monopoly on legitimate violence and the power to regulate money and credit. Whatever we build has to interface with existing law without itself relying on coercion.

These constraints define the foundation. New weight should only be added once the foundation has been proven strong enough at the current scale to carry it. The foundation itself is never finished — it is continuously strengthened and adapted as the network grows.

**In practice, the foundation needs to hold these elements, in this order of priority:**

- proven local closed trade unions that already deliver real economic value — better liquidity, higher-quality goods and services, lower friction — under the moral good standard, with no moral evil paying off inside them;
- clear, locally adopted definitions of the standard, enforced only by the people who know the parties, with standing visible across the network;
- sustainable revenue coming from the high-quality products and services inside those unions, not from grants or outside capital as the long-term fuel;
- technical infrastructure (ledger and clearing) that stays open, non-capturable, and privacy-respecting where it needs to be, so reputation and credit history can travel without trapping anyone;
- legal interfaces that keep the system compliant or at least non-confrontational in the places where the first unions operate;
- and a culture in which the standard is experienced as simply better, not as something imposed from above.

Only after these pieces are solid at the current scale can we safely add the next layer of interconnection, monetary tools, or containment without putting the structure at risk.

That is why the work moves in clear phases, each one strengthening the foundation before the next weight arrives.

**Phase 0 is simply drafting a provisional standard.**

One person, or a very small group, can write the first operational definitions of each moral good and moral evil, along with the concrete tests that would show moral evil is not paying inside a union. This draft has no binding force on anyone. It is only a starting proposal so the first union has something concrete to work with. It becomes the working standard for a given union only after that local union votes to adopt it. Later unions can propose changes, and any network-wide change needs the same broad consensus as any other change to how the network works. The draft is never treated as final or owned by whoever wrote it.

Phase 0 also includes the research and social-engineering work needed to identify a real dense complementary core of businesses (order of magnitude ~150 or the local equivalent) that already have overlapping invoice/obligation chains and genuine mutual needs. Identifying that dense core is part of preparing the smallest viable unit for Phase 1.

**Phase 1 is building one functioning closed trade union.**

We start with the smallest viable unit: a single closed union (in the spirit of a credit union or mutual-credit network) among people or businesses that already have real, complementary needs. That unit is formed by first identifying and recruiting a dense complementary core (guided by the ~150-business scale that research shows can produce meaningful cycles when fully participating).

The union operates from the start as a basic mutual-credit system with simple internal clearing, using whatever existing or lightweight tools are sufficient for that local density. Local proof of value and incentive alignment is the irreducible foundation. Without it, any later clearing layer has nothing solid to amplify and any containment layer has nothing resilient to protect.

Trust is built and held locally by the people inside the union who actually know the members. Any central entity, if one exists, only provides the shared infrastructure — the ledger and the technology that can later connect unions. The sophisticated, network-scale clearing and monetary layer is deliberately left for Phase 3; the first union does not wait for it and does not depend on it.

The provisional definitions from Phase 0 go to a local vote. They become the working standard for that union only if the members adopt them. A departure from the adopted standard only counts when the person knew it, could have followed it, and chose not to. This is not ongoing surveillance. Judgment is applied only when a real, specific action calls for it, and it always stays with the people who know the person involved.

Members agree when they join that their standing is visible across the network, so moral evil cannot simply be hidden by moving to another union. Changing the standard itself still needs broad consensus; it can never become anyone's private property.

New members build trust through people who already know them. No one's livelihood is put on the line for someone else. Someone with no existing connection simply builds trust directly with the union — it costs time, not entry.

From day one the union is a closed trade space where members exchange things they already need. Those exchanges are enabled by the basic mutual-credit system with simple internal clearing. That is how it has real value immediately, the same way the WIR Bank in Switzerland has worked since 1934 and the Sardex network in Sardinia has worked for more than a decade. Revenue has to come from the high-quality products and services exchanged inside the union itself. Grants may help us start, but the long-term life of the work depends only on that real revenue.

We design structural incentives, transparency, reputation costs, and real checks so that moral evil carries no gain and moral good trade becomes the expected, visible norm. We do not assume this works. The first union has to prove it under real conditions before any second union is connected. If moral evil still pays somewhere, we stop and fix it first. No one is forced to stay, and no one is forced to trade with anyone. What changes when someone steps away from the standard is simply who chooses to trade with them.

The goal is not that people feel they are following a rule. The goal is that the standard becomes something they have seen is better and take on as their own, so natural that it takes almost no effort.

Reputation and credit history stay portable. The underlying protocol stays open, never owned by a single company, so the network cannot trap people by becoming too dominant to leave.

The first good result we aim for in Phase 1 is clear local proof: members voluntarily prefer the outcomes, real economic value is flowing, and moral evil yields zero or negative returns inside the group under real conditions. Clearing-percentage metrics are secondary at this stage.

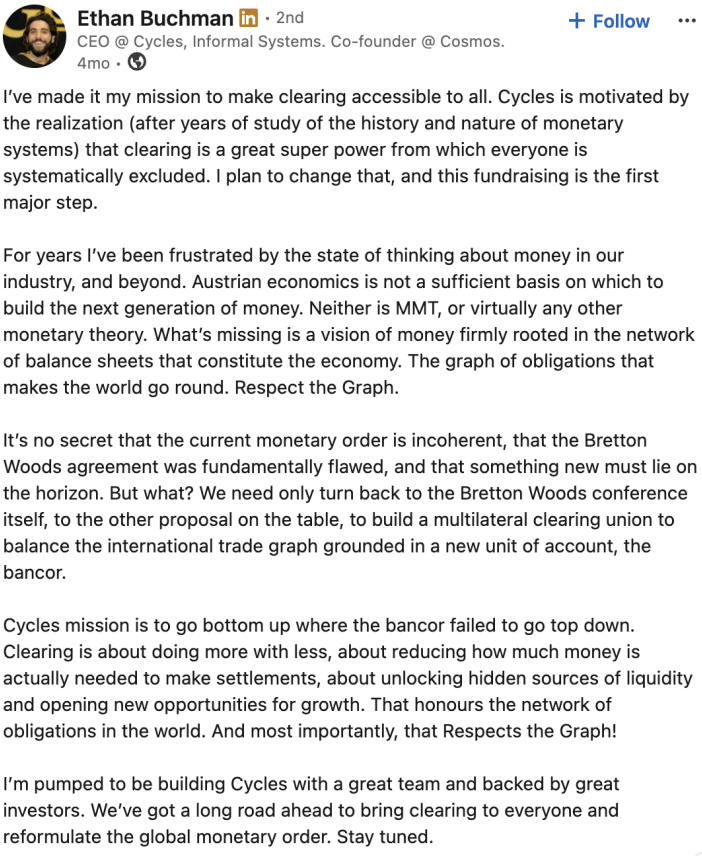

**Phase 2 is interconnection, but only after local saturation and proof.**

A second union is connected only when real trade already flows between them and both have shown that the standard holds. Growth happens one union at a time. Each reaches real local saturation and proves the incentive structure before linking to a neighbor. That working link is the unit of success, not some global percentage decided in advance. Network effects appear only after multiple unions have demonstrated superior outcomes. Early growth is almost entirely local. As unions prove themselves, more people see that it works and choose to join — the same way credit unions grew from a single one in Quebec into a movement across North America.

**Phase 3 is the clearing and monetary layer, treated strictly as an amplifier.**

Only after local unions have proven superior value and the moral standard holds do we make or join a project with a credible path toward improving the global monetary order. This layer is distinct from the basic mutual-credit and internal clearing already operating inside each local union since Phase 1. Clearing and monetary tools are useful only to the extent they lower the cost of honest exchange. They are not the foundation.

I researched and found Ethan Buchman, CEO of Cycles Protocol SA, who has written that they have a long road ahead to bring clearing to everyone and reformulate the global monetary order.

**Ethan Buchman** · 2nd
CEO @ Cycles, Informal Systems. Co-founder @ Cosmos.
4mo · + Follow ···

I've made it my mission to make clearing accessible to all. Cycles is motivated by the realization (after years of study of the history and nature of monetary systems) that clearing is a great super power from which everyone is systematically excluded. I plan to change that, and this fundraising is the first major step.

For years I've been frustrated by the state of thinking about money in our industry, and beyond. Austrian economics is not a sufficient basis on which to build the next generation of money. Neither is MMT, or virtually any other monetary theory. What's missing is a vision of money firmly rooted in the network of balance sheets that constitute the economy. The graph of obligations that makes the world go round. Respect the Graph.

It's no secret that the current monetary order is incoherent, that the Bretton Woods agreement was fundamentally flawed, and that something new must lie on the horizon. But what? We need only turn back to the Bretton Woods conference itself, to the other proposal on the table, to build a multilateral clearing union to balance the international trade graph grounded in a new unit of account, the bancor.

Cycles mission is to go bottom up where the bancor failed to go top down. Clearing is about doing more with less, about reducing how much money is actually needed to make settlements, about unlocking hidden sources of liquidity and opening new opportunities for growth. That honours the network of obligations in the world. And most importantly, that Respects the Graph!

I'm pumped to be building Cycles with a great team and backed by great investors. We've got a long road ahead to bring clearing to everyone and reformulate the global monetary order. Stay tuned.

Cycles, or any equivalent open clearing protocol, can be useful infrastructure if it amplifies capital efficiency and reduces working-capital friction while remaining fully subordinated to the local-union standard and introducing no new moral-evil vectors (no centralized risk, no opacity, no capture). It is not the foundation. We do not wait for it or depend on it. The first unions can and will be built with existing tools if necessary. If joining, partnering, or using that technology is not possible or influence is limited, we simply build our own under the exact same principles: open protocol, local control of the standard, and revenue from real products and services.

Higher clearing rates (for example the 10 % network-wide debt reduction or better that denser graphs can achieve) become relevant only after multiple local foundations have already been proven solid.

**Phase 4 is containment, and it comes last.**

Some people will simply disagree with a world order built only on moral good. They are free to keep trade the way they do now.

For people who genuinely want to engage in moral evil against others in the physical world, we will eventually build a hyper-realistic digital game that contains all the components of the current world order. Entry requires informed consent to the specific terms — not just consent to play a game in general. Everyone who joins agrees upfront that moral evil is part of what they are signing up for, and the game only matches people who have accepted those same terms.

The game stays fully sealed from real-world currency. There is no way to convert in-game value into real money or real money into in-game value, so nothing that happens inside produces a real financial victim outside it. This is similar to how players in EVE Online accept scams and wars as part of the known design, except here there is no real-money bridge at all.

This is not meant to reduce real-world moral evil — that is the job of the standard in the local unions. It exists only to give people who are set on these behaviors a place to act without a real victim. Whether the containment holds at scale — no real-world bleed, no erosion of the consent design under pressure — is tested before it is treated as reliable. It is built only after the main network has shown that moral evil is unprofitable inside the standard and that the positive system is resilient.

Right now the work concentrates on Phase 0 and Phase 1. Phase 2, Phase 3, and Phase 4 are added only after the required proofs at each prior stage. Phase 4 needs its own dedicated people and begins only when there is a team for it and the positive system has already proven resilience. No part of this plan depends on any one company or any one leader.

**Making all of this real as fast as possible, while never moving faster than the foundation can carry, means:**

- the Phase 0 draft remains only a provisional proposal that local unions can adopt, reject, or revise by vote;
- Phase 0 includes identification of a dense complementary core so Phase 1 can start at the true smallest viable scale;
- one proven union with tested incentives and real revenue before any second union;

- working inter-union links only after local saturation and incentive proof;
- clearing technology only as an amplifier of already-proven local value;
- the containment game only after the positive system is resilient;
- legal interfaces designed for the first jurisdictions before any expansion;
- an open, non-capturable protocol and portable reputation from the start so the network cannot trap people;
- and a living standard that every union votes on, with network-wide changes requiring broad consensus.

**A few hard constraints will set the real pace.**

- Proving that moral evil truly yields zero or negative returns inside the system is the slowest and most important work. If it still pays, we stop and fix it before adding weight.
- Legal compatibility in the first jurisdictions will set the ceiling more than technology ever will.
- Network effects appear only after multiple unions have demonstrated superior outcomes; early growth is almost entirely local saturation.
- Some people will prefer the existing order or the game. The design treats them as free to stay outside. The only lever is demonstrated superiority.

This sequence is the fastest route that still strengthens the foundation before each new load. Any acceleration that skips a proven local union, an incentive test, or open non-capturable infrastructure trades short-term momentum for long-term structural failure — and violates the vision itself.

**To move through these phases I need to partner with extraordinarily capable leaders in their domains.**

Leaders operate inside the same consensus process everyone else follows. Their speed comes from being excellent at proposing, building, and executing, not from any authority to bypass the local unions' vote.

I do not want to be the leader everyone follows, and I do not want to manage anyone. I expect many such leaders to gather around the work. Each of us leads through our own work and has one priority every day: doing the work that leads to the vision. Where our work meets, we sort it out directly with each other; if we cannot agree, we use the same consensus process.

Among the leaders I would like to partner with are Alex and Leila Hormozi. My idea is to connect the business or project — whatever form it takes under the principles above — with them so they can help the businesses inside the network build and deliver high-quality products and services strictly on moral good. I have consumed more than four thousand hours of their content over the past few years. I believe they are among the greatest business minds of our generation who truly care about the people they serve, not just money. I do not agree with everything they teach, but I agree with a lot of it. I take

what is useful and leave the rest. If they do not take part, I will look for other leaders who can play the same role. Their contribution, or that of anyone equivalent, is valued for strengthening the foundation of real economic value creation, never as central authority.

To find and deeply connect with these kinds of people I am thinking of two practical things: learning their main language and culture at least at a basic level, and having the resources to reach them reliably and to help them shine in their domains.

I believe there are so many great talents scattered around the world — some poor, some rich, some powerful, some not, some broken inside and looking for someone who can help, some living fully, some already retired. Many of them, whatever their situation, would want a world order where society advances through high-quality products and services built only on moral good, because they or people they care about have been hurt by moral evil. Not everyone will want it, and some benefit from how things are now. That is why we offer the standard and do not impose it.

**Earning as much as we can, while truly caring about people, is how every phase gets built.**

Money is a tool for the vision and for the people we care about, not a goal in itself. If the two ever pull in different directions, we choose to move a little slower rather than care less. That does not mean we stop pushing for the most money possible; it means we get there without cutting corners on care. Grants can help us start, and they are part of the foundation. But we will not depend on grants or outside investment to let the work live, run, and scale. Once we have started, the money comes from doing business well — from the revenue of high-quality products and services. Speed then depends on our own execution, not on someone else's approval timeline.

I am not saying any of this will be easy, or that these ideas are set in stone. They are what I have in mind now. I do not have all the answers yet. The hardest problems I expect are keeping the system morally good as it grows, protecting the trust inside each union from people who would abuse it, fitting what we build to the rules of each place we work in, and keeping the standard itself living and non-capturable as unions multiply.

We will solve them one at a time with the people who join, by never growing past what we have proven, by treating every unproven incentive or legal interface as a foundation gap that must be closed before the next weight is added, and by ensuring the provisional draft from Phase 0 remains only a starting proposal that local votes can always revise.

**Why do I want to work on this vision?**

I'll first talk about my personal reason, then I'll touch on the defensive reason and inspiration reason.

I have many painful experiences that cause the excruciating pain of misery I'm constantly in.

Here are some:

~ When I was six years old, my father left us from the Philippines, went to the US, and didn't come back. Later on, we found out he's with another woman already. Our family is not well-off, so I assume one reason he betrayed us is because of money.

~ Growing up, I followed my mom's advice to do well in school and graduate with honors so that "I'll be able to get a high-paying job". I did graduate with honors but all the entry-level jobs in the Philippines were low-paying. We didn't have the idea of me getting work overseas. All my skills were optimized on "graduating with honors", not on "getting a high-paying job". Later on, I understood that schools are businesses themselves. Many of them operate to maximize profits, and put up a facade to care about students and teachers, but in reality, they only care about money, not people.

~ In my job as a structural engineer, my boss talked to me in private forcing me to just let the failed structure seem like it passes so that we can submit the long-overdue project and get paid. He said he would be the one to take the blame if ever something bad happens to the structure once built. He only cared about the money, not the people who would die if the structure actually fails.

~ I've had four different digital freelancing jobs that collectively were paying me 20x of my one engineering job. To keep the story short, despite being in different industries and different places around the world, all of them only cared about the money, not their employees and not the people they're serving.

~ My mom decided to get our first house built by a contractor she personally knew. I trusted my mom with her judgement and didn't bother prying into the specifics of her deal with the contractor because I was busy working 4 jobs. Later on, we found out that the contractor was a fraud and he disappeared one day when he got full payment, without even finishing the home.

One recurring theme in these five experiences was that many people only care about money, not others. Many people only care about themselves and their loved ones, not others. I realized this is how money influenced and set the norms of society. Money, fame, status, and power aren't evil in themselves. They're tools, and the problem is people who use them for moral evil, or who care about them more than they care about people. It's scary to think that as society progresses, more and more people would care only about money tied with fame, status, power or other social markers. I don't want this to happen.

This might sound extremely selfish.. but it's best for me to be honest.

The reason I want to work on this vision is to save myself from this aching feeling of misery.

I hate that everywhere I worked, my colleagues and/or boss only cared about money and it’s okay for others to fall just so that they could rise.

I hate that everywhere I go, there are people who are rude to low-paid kind workers but respectful to high-paid arrogant workers.

I hate that the government system, the work system, the school system, and all other global systems favor the ones who make the most money regardless if they’re doing moral evil to others.

I hate that when I tried to ignore all of these and just lived my life, I felt empty.

I tried working jobs that paid very low, and jobs that paid very high, but none of them made me happy.

I went on vacations with my friends or with my mom, but I didn’t feel happy.

Every single day, It’s like I’m alive.. but I don’t feel like I’m living.

I hate this aching feeling of misery knowing that I can't change the way things are with the world because so much of the current system, and the people who benefit most from it, work to keep things as they are.

I want to change the world fast, and maybe as I'm doing the work, this feeling of misery would slowly go down, one union at a time, as more places uphold the standard of building high-quality products and services strictly on moral good, never on moral evil.

This is my personal reason.

As for the defensive reason of why it's useful for humans and the society, having everyone choose to uphold the new standard meaningfully lowers the chances of humanity getting wiped out.

Think about it. If the norm everywhere in the world is to only do moral good, never moral evil, wouldn't that at least remove one contributing factor in whether AI trained on human data ends up misaligned with us? I know the leading argument in AI safety research says the bigger risk isn't what an AI has seen, it's that a sufficiently capable, goal-pursuing system can discover deception or self-preservation as useful strategies on its own, regardless of its training data, so this isn't a guaranteed fix, and I won't pretend it is. But a world that treats moral evil as never an option is still one less thing feeding whatever an AI learns from us, even if it's not the main lever.

Think about it. If the norm everywhere in the world is to only do moral good, never moral evil, wouldn't there likely be far fewer humans who'd want to see the human race wiped out? The painful experiences that many humans harbor in their hearts because of other people's moral evil is a real source of motivation for some to want to take revenge by killing us all. Grief, despair, or hopelessness unrelated to anyone's moral evil could still push a small number of people toward wanting humanity gone, but removing a major, active source of grievance should still meaningfully lower how many people end up there.

Even if humans become a multi-planetary species and inhabit all planets possible, that wouldn't remove the risk that comes from moral evil. As long as moral evil is still accepted in the physical world in any way, shape, or form, the chances of humanity getting wiped out are higher than if there is no moral evil.

To be clear, moral evil causes suffering because someone else chose to do them. While natural evil is suffering that comes from the world itself, not from anyone's bad choices (like natural death, natural disasters, scarcity, physical limits, grief, unrequited love, honest failure).

They say the path to wisdom is attained only through struggle, pain, failure, so on and so forth. If there is no moral evil being done in the world, humans, AI, and robots can still get a lot of wisdom and learning from the struggle, pain, and failure from natural evil.

So, the defensive reason is that upholding a standard of moral good, never moral evil, improves the probable lifespan of civilization.

Next, the inspiration reason. Life cannot just be about solving one sad problem after another. There must also be things that make you excited to wake up in the morning. That makes you look forward to the future. That makes life worth living.

Everyone doing only moral good, never moral evil, enables everyone to constantly experience this great feeling, no matter what they want to do.

Right now, there are billions of people who don't experience this feeling, which is largely caused by the ripple effects of the moral evil that people do.

The inspiration reason to work on making the vision a reality is to free everyone from the ripple effects of moral evil, so that doing moral good is finally enough to make their life worth living.

I know the journey to this goal will be very hard, and I know there are many risks I'm gonna need to take, and the message I need to remind myself of most is: "Never give up."

I'll live as long as humanly possible to make my vision a reality and uphold it for an extended period of time so that people all over the world would accept and embrace it as the new better norm than the current one.

As long as we never give up and do things fast while staying true to the vision, I believe we'll get what we want while we're alive.

**Want to know more about me?**

This section is miscellaneous and would probably have added information in the next few years as I'm working on the vision.

Note that the information written here is just a tiny speck of myself.

This means that you cannot expect that what's written here or anything you can find on the internet is the full me.

The only one who can fully understand myself is me.

Unless I have personally stated something in person or on the internet, don't believe in what you see or hear from others about me.

Get to know me personally on a genuine deep level first, and then draw your conclusion.

Okay, let's start.

I grew up from a not so well-off family in the Philippines. I was taught to follow what the majority has done: study hard, get high grades, graduate with honors – to land a high-paying job.

I did these, but I didn't get a high-paying job, not even a job I'd be proud to work in.

Then the covid pandemic came, together with a few more painful experiences I mentioned in the previous section.

All my painful experiences made me think more deeply on why the world is like this.

It took me several years to realize how the real world works. I don't mean that I know everything. I just mean there's a lot most people never get access to, information the people who benefit from things staying the same have little reason to share.

One of my first realizations was from a guy named Alex Hormozi. He's known to be a business person, but the first content I saw from him was philosophical, then the next thing was psychological.

I was simply amazed.

All my life, I only thought that there's only one side to a domain. If I studied structural engineering, I thought it's all only about structural engineering. But there's so much more to it. There's a philosophical side to it, psychological, behavioral, finance, so on and so forth.

In Rick Rubin's words:

"I think that creativity is beaten out of us over the course of our lives. We go to school, we're told to repeat back what we're told. We're told to sit in a chair all day. Our spirits are broken by institutions.

We're not taught to be free creative thinkers. We're taught to follow rules. The rules are not there to help us. The rules are there to control us.

I'm suggesting we break free and be free and express ourselves freely. And that's our purpose here on the planet. To express ourselves freely. That's why we're here."

This is about creative conformity, breaking free of the rules that flatten how you think and create. It's not about dealing honestly with the institutions we work with, which I addressed earlier. Those are two different things.

Since my first realizations from Alex Hormozi, I've taken in a lot of information from many different people way ahead of me in the thing I want to do, but I've also learned not to follow something just because someone told me to. I use the framework I described at the start: take what's useful, discard the rest, and add something of my own.

I just need to be true to myself. Work hard. Never give up. Keep going without putting undue pressure on myself. I want to find a way to live without that pressure, so I can be totally free in what I make and become my dream version of myself. And hopefully at some point that dream version takes over and becomes my whole life, not just my passion.

With these as my guide, I choose to do what's good for me first and foremost. This is what I meant earlier by never compromising who I want to be or the boundaries I've set for my own life. What's good for me is the work that leads to the vision, so that is my only priority. Everything else is either a boundary or a bonus.

My boundaries are my family, eating great food, and exercising. Wherever the work takes me, my family comes too, and I won't leave the people I care about behind for the sake of the vision. In the same way, I won't give up eating great food or exercising for the sake of the vision.

The following are not priorities or boundaries, just added bonuses: digital gaming, watching anime, reading manga/manhwa/manhua, and traveling around the world with the people I care about while experiencing high-quality products and services.

For myself, I don't need money, fame, status, power, or any other social markers, but I care about what the people I care about, and the people I work with, care about. If they want money, fame, status, power, or any other social markers, I'll do everything I can to help them get it, as long as they use it for moral good, never moral evil. If I find out they're using it for moral evil, I stop helping, after checking honestly that it's true.

What I need most for the work is people who believe in the vision, can manage themselves, have the skills to execute work excellently and fast, and who I genuinely like working with. If that's met, I'm all good. I won't work with people I don't like, no matter how capable they are. That doesn't change who the vision is for, only who I choose to build it with day to day.

I understand that my vision involves ALL the people in the world, and I understand people should be free to do what they want. That's why my rough plan talks about how to deal with people who want to do moral good, people who want to do moral evil, and everyone else in between.

**My motivations**

Apart from the personal, defensive, and inspiration reasons I mentioned before, here are my other motivations in no particular order:

I want to make my mom happy before she dies. She said that the biggest thing that'll make her happy is to see me succeed and do things that make me happy.

I've explained before that I've tried many things but none of them have made me constantly feel happy. I think the answer is a combination of work and relationships. Specifically, work worth working, and genuine relationships built on moral good, not moral evil. I believe that as I'm working on the big vision, I'll meet likeminded people who want to do good to the whole world, not just to a small community.

What my mom actually wants is to see me succeed and be happy, and that is one part of the reason why I want to build this fast (while having a strong foundation). But I also want to give her something real, not because I owe it to her, she never asked for anything back, but because of how much she's given me without ever expecting it returned. For now, one of my short-term goals is to give her $500k to spend for herself. This money isn't for me. It's something I can give her, and I trust her to spend it on moral good, never moral evil.

Next, I've come to understand that motivation is the opposite of deprivation, at least in part. We're more motivated to eat if we're deprived of eating. We're more motivated to sleep if we're deprived of sleeping. This isn't the whole story of what drives people, curiosity and novelty pull on us even without deprivation behind them, but the deprivation side of it is the part I feel most directly.

All my life, I'm deprived of seeing people do moral good genuinely. So much of my experiences in any place I go and any nationality I've interacted with, it has felt like there are more people doing moral evil than moral good, regardless of their wealth, status, fame, or other social markers.

My hypothesis is that one big reason why people choose moral evil knowingly, unknowingly, or unintentionally is because of the pain and suffering they got from others who did moral evil.

The act of moral evil can have a ripple effect just like the act of moral good.

Quantitatively, moral good happens exponentially more often than moral evil. However, moral evil possesses a disproportionate structural weight wherein a single act can echo across generations, making it *feel* as though evil dominates the world.

All my life, I've experienced so much of the damage from these moral evil ripples that I feel so empty.

It feels like I've lived for thirty thousand years. It's like I've lived life after life, constantly being reborn, all the way to now. Each rebirth is a search for a place to belong. When I finally come across a place that feels like home, I still know deep down that it isn't where I truly belong. So I set off again, carrying that longing, and am reborn once more.

What does it take to break this cycle?

In this world, I believe leaving nothing to regret is the only way out of the cycle, so I'm no longer reborn, meaning I live this life so fully that I'm no longer searching for somewhere else to belong.

Working on this big vision is the only thing now that would not make me regret this life.

One reason I want to build this fast is that I fear the people building AI at the frontier are making AI much smarter and much more capable than humans at any task, faster than society can test and manage the risks. AI can do moral good or moral evil, and the more capable AI gets, the more it matters which one it does. If the AI they're building now ends up advancing society through high-quality products and services built on both moral good and moral evil, it will be much harder to build and uphold a world order built strictly on moral good, never on moral evil. That is why I want to move fast, but I won't cut corners on the foundation.

Next, even if money wouldn't matter anymore because AI and robots outpopulate humans and make high-quality products and services faster and better than humans can, this doesn't ensure that the world order would be built only on moral good, never on moral evil.

Aren't every one of us human beings?

Between people, shouldn't there be at least some basic moral good shown and lived at every age at any place in the world?

Shouldn't everyone get the chance to see for themselves that doing moral evil does extreme damage to people and the society, so that doing moral good becomes their own standard for every act?

This is what I want to work on.

Before, I really didn't like all the power struggles at any level in society.

But now I see it differently.

That was just me running away.

I have to fight for the life I want.

So this time, I'm giving it my all.

I'm fighting for myself first, and for the people I care about, and for everyone this vision is for. So that when we make the vision a reality, moral evil becomes rare enough, and easy enough to handle, that it no longer runs my life, even on the days it still crosses my path.

To you reading this, if you feel the same and you have the skills to do the work I said in the rough plan, such as running or governing community finance, fraud and risk, ledger software, or fitting what we build to the standard of each place we work in, send me a genuine message to help.

Tell me what you've worked on and which of the hard problems above you'd want to take on first. You can reach me at [raymond.delarama55@gmail.com]
