My Open Manifesto by Ray Dela Rama [raymond.delarama55@gmail.com] October 10, 2026

PART I: INTRODUCTION & PERSONAL COMMITMENT

I am writing this for myself first, driven by a vision of the future I'm committed to making real. I aim to build fast, but **never faster than the foundation can carry**, such that the foundation will be strengthened before each new weight arrives.

The Vision

A global economic order anchored by interconnected trade networks that advance human flourishing through high-quality products and services—built strictly on moral good (honesty, consent, fairness, kindness, and respect), making moral evil (deception, exploitation, coercion, theft, and violence) structurally unprofitable, irrelevant, and obsolete.

The Thesis

By removing the massive hidden costs of lying, cheating, and delayed payments through clear local trade unions and open clearing tools, a moral-good trade network creates **demonstrably better economic life for everyone**. Because it relies entirely on voluntary choice and honest cooperation, it naturally outcompetes unfair systems—delivering better products, safer businesses, and thriving local communities without forcing anyone to participate.

Plain-Language Everyday Benefits:

- **No Endless Waiting to Get Paid:** Unpaid invoices cancel out automatically in closed loops, giving businesses instant financial breathing room without taking on bank debt.
- **Cheaper to Run a Business:** Without high bank interest, heavy legal fees, or middleman cuts, the cost of doing business drops significantly.
- **Honest Products That Last:** Because members are held to a clear moral standard, products are built to serve real human needs, not to trick buyers with hidden defects.
- **Protection in Hard Times:** If the broader economy freezes or experiences a cash shortage, local businesses can keep trading essential goods and services safely with each other.
- **Complete Peace of Mind:** Full ledger visibility means you always know who you are dealing with, eliminating the fear of hidden debts, scams, or sudden defaults.
- **Stronger Local Communities:** Value stays within the network and the local area, helping small businesses grow, create real jobs, and support their families.

Personal Operating Framework & Leadership

I have no achievements online that prove I am fit to work on making this vision a reality. But a key framework I apply to all my work is to **observe what people far ahead of me are doing, take what's useful, discard the rest, and add something of my own.**

I'm determined to make this work, alongside trusted individuals who share the vision and have the skills and motivation to work on it. I am sharing my plans openly to attract capable leaders with an extraordinary sense of responsibility, strong ambition, relentless curiosity, and a genuine concern for where this work leads. **I'm not looking for anyone to manage: I expect every leader to manage themselves and lead through their own work.**

For myself, I don't value money, fame, status, power, or other social markers for their own sake. I value them only as tools—for making this vision real and for the people I care about and work with, if they want them. Tools can be used for moral good or moral evil, and I will use them only for moral good.

More broadly, I'll do everything I need, using only morally good means, to make this vision real and prevent total failure, but never at the cost of who I want to be or the boundaries I've set for my own life. **Total failure only means that our operations are completely shut down and no one is left able to continue them.** It could come from illegitimate interventions or from circumstances nobody caused on purpose. Illegitimate interventions are those that rely on moral evil, unlike rules that are open and apply to everyone.

Our aim is to build something better than the current world order, starting small and proving each step, until enough people see for themselves that it is better and choose it. That is how it becomes the new standard the world holds itself to. Many of history's most lasting changes came from people choosing something better, not from force. As the vision comes to reality, **I wish for everybody to easily find a place in their life where they can live and work in their zone of genius and in what makes them truly happy without worrying about money, fame, status, or other social markers.**

Let's focus on the work that leads to the vision.

PART II: WHY I AM BUILDING THIS (MOTIVATIONS & REASONS)

1. The Personal Reason: Escaping the Misery of Systemic Evil

I'll be honest: my deepest personal motivation is to save myself from an aching, constant feeling of misery. I grew up facing experiences where people repeatedly chose money and self-interest over the well-being of others:

- **Family Betrayal:** When I was six, my father left us in the Philippines for the US and never returned, leaving my non-well-off family behind to pursue money and another life.

- **Educational Misalignment:** I followed advice to graduate with honors expecting a high-paying job, only to realize entry-level engineering jobs paid practically nothing. I realized schools are businesses optimizing for profit, putting up facades of care while treating students as revenue units.

- **Corrupted Structural Engineering:** As a structural engineer, my boss privately pressured me to approve a failing structural design just to collect payment on an overdue project, assuring me he'd take the blame if it collapsed. He cared about money; I cared about the human lives inside that building.

- **Exploitative Global Freelancing:** I worked four digital freelancing jobs paying 20x my engineering salary. Across multiple global industries, the story was identical: total indifference toward employees and clients, optimizing solely for revenue.

- **Fraudulent Contracting:** A contractor my mom personally trusted disappeared with full payment for our family home before finishing the build, leaving us empty-handed while I was working four jobs to fund it.

Everywhere I looked, the norm of society was set by money, status, and power. People were rude to kind, low-paid workers and respectful to arrogant, high-paid ones. The current system rewards moral evil if it makes money.

Trying to ignore this made me feel dead inside. I worked low-paying jobs and high-paying jobs; I went on vacations; I tried living quietly. None of it worked. Every day felt like I was alive, but not living.

I want to change the world fast, one union at a time, so that as more places uphold moral good, this misery slowly fades—not just for me, but for everyone trapped in it.

2. The Defensive Reason: Improving the Lifespan of Civilization

Establishing moral good as the dominant global standard directly improves humanity's chances of survival:

- **AI Alignment & Training Ecosystems:** While frontier AI safety research demonstrates that advanced goal-directed systems can discover deception independently, training models on a human dataset where moral evil is structurally eliminated removes a massive vector of bad human behavior from the AI learning environment.

- **Reducing Extinction-Level Grievance:** The painful experiences people harbor from being victimized by moral evil create real motivations for revenge, nihilism, and destruction. Removing active grievances lowers the number of individuals who wish for human extinction.

- **Multi-Planetary Risk Reduction:** Becoming multi-planetary does not save us if moral evil travels with us. Eliminating systemic moral evil lowers civilization-level extinction risks wherever humanity spreads.

- **Wisdom Through Natural Evil:** Moral evil causes suffering by choice. Natural evil (natural disasters, grief, physical limits, honest failure) provides all the friction, struggle, and pain necessary for humanity, AI, and robots to gain deep wisdom without humans destroying one another.

3. The Inspiration Reason: Making Life Worth Living

Life cannot just be about solving sad problems; there must be things that make you excited to wake up. Right now, billions of people never experience true joy due to the cascading ripple effects of moral evil.

Moral good happens quantitatively more often than moral evil, but moral evil carries a disproportionate structural weight—a single act of betrayal or theft echoes across generations. My hypothesis is that people often choose moral evil because of the unhealed damage inflicted on them by others.

By eliminating the profit of moral evil through structured trade unions, we break this chain reaction, freeing people from the ripple effects so that doing moral good is finally enough to make life worth living.

4. Frontier AI & The Urgency of Time

I fear that frontier AI developers are building systems smarter than humans faster than society can manage the risks. If superintelligent AI is deployed into a world where society advances through a mix of moral good and moral evil, entrenched evil will become nearly impossible to dismantle. Moving fast to establish moral-good clearing networks ensures that as AI and robotics scale, the underlying economic foundation is already rooted strictly in moral good.

5. Personal Motivations & Boundaries

- **My Mom:** I want to make my mom happy before she dies by showing her I can succeed doing work that makes me truly fulfilled. As a concrete short-term goal, I want to give her **$500,000** to spend freely on moral good, returning a fraction of what she gave me without expectation.

- **Breaking the Cycle:** Deprivation drives motivation. Having been deprived of genuine moral good all my life, working on this vision is the only thing that leaves me with zero regrets, breaking the feeling of endlessly searching for a place to belong.

- **Fighting for Life:** I used to run away from power struggles. Now I realize I must fight for the life I want—for myself, my family, and everyone this vision serves.

PART III: PERSONAL BOUNDARIES & MISCELLANEOUS CONTEXT

This document is a small speck of who I am. You cannot know the full me from the internet; get to know me personally on a deep level first before drawing conclusions.

- **Learning from Those Ahead:** My eyes were opened to cross-domain thinking through Alex Hormozi (viewing business through philosophy, psychology, and behavior) and Rick Rubin (breaking free from institutional rules to think creatively). I take what is useful, discard the rest, and add my own.

- **My Uncompromising Boundaries:** Wherever this work takes me, my family comes too. I will not sacrifice my family, eating great food, or exercising for the vision. These are my non-negotiables.

- **Added Bonuses (Not Priorities or Boundaries):** Digital gaming, watching anime, reading manga/manhwa/manhua, and traveling the world with people I care about while experiencing high-quality products and services.

- **Helping Others Achieve Their Goals:** I don't care about money, fame, or status for myself. But if my family or teammates want them, I will do everything using moral good to help them achieve those markers, provided they use them strictly for moral good. If they use them for moral evil, I stop helping.

- **Teammate Selection:** I only work with self-managed people who possess high execution skills, believe in the vision, and whom I genuinely like working with. I will not work with people I don't like, regardless of how capable they are.

PART IV: THE OPERATIONAL ROUGH PLAN

1. Theoretical & Research Foundation

The Slovenian Benchmark (Tomaž Fleischman Research)

- **The Historical Context (1991):** Following independence, Slovenia faced severe inflation and debt cascades. Its population was **1,913,355**, with a GDP of **~$13.83 Billion USD** (~$7,229 GDP per capita).

- **The 7.5% GDP Breakthrough:** By deploying a national-scale multilateral obligation clearing system (TCT/Tetris Core Technologies), Slovenia neutralized internal debt loops ($A \to B \to C \to D \to A$), saving approximately **7.5% of national GDP** in its first year—amounting to **~$1.04 Billion USD** (~14.25 Billion Slovenian Tolars / SIT) in freed-up liquidity without borrowing or central bank money creation.

- **Scale-Free Networks & Network Density:** Research on scale-free trade networks shows that while a core of **~150 dense, highly interconnected businesses** provides the smallest viable unit to find initial closed loops, reaching **1,500 to 3,000 interconnected businesses** unlocks broad, network-wide liquidity clearing.

2. Irreducible Constraints

Every phase, partnership, and decision must remain true to the vision. Where a choice would make things faster but requires moral evil, even against a single person or AI, the vision comes first. The design must outlast any single founder, leader, protocol, or company.

1. **Voluntary Exchange:** Value is produced and exchanged voluntarily—coercion and deception are off the table by definition.

2. **Local Trust:** Trust is local and expensive. Global ledgers can amplify local trust; they cannot create it.

3. **Incentives Dominate Behavior:** The design itself—radical ledger visibility, clear standing, reputation costs, closed trade unions starting with real mutual need, and open exit rights—makes moral good the higher-return path.

4. **Money & Credit as Coordination Tools:** Changing monetary tools is useful only when it lowers the cost of honest exchange. Complementary systems that demonstrably outperform on working capital and quality have the best chance of adoption.

5. **No Single Point of Failure:** Durability requires open, non-capturable protocols, local voting on standards, portable reputation, and distributed competence.

6. **Interface with Existing Reality:** The system interfaces cleanly and legally with existing state laws and tax rules without relying on coercion or confrontation.

3. The Foundation Hierarchy (In Order of Priority)

1. **Proven Local Closed Trade Unions:** Unions delivering real economic value—better liquidity, higher-quality goods, lower friction—under the moral good standard, with zero profit for moral evil.

2. **Local Standard Adoption & Radical Ledger Transparency:** Clear definitions of the standard voted on locally, with all corporate obligations, invoices, standing, and debt loops **100% transparent and visible across the union network** so hidden debts, double-pledging, and secret insolvencies cannot exist.

3. **Sustainable Internal Revenue:** Long-term fuel coming from real trade in high-quality products and services inside the unions, not from permanent outside grants or capital.

4. **Open, Non-Capturable Infrastructure:** A transparent ledger and clearing engine that stays open and non-capturable so reputation and credit history travel without trapping anyone.

5. **Legal & Tax Interfaces:** Interfaces designed for compliance (e.g., central bank regulatory sandboxes, e-invoicing compliance, tax rulings) in every jurisdiction of operation.

6. **Cultural Ownership:** A culture where members experience the standard as simply better life, not as something imposed from above.

4. Phased Rollout Plan & Timeline (Philippine Model Example)

Phase 0: Provisional Standard, Legal Sandbox & Dense Core Identification

- **Provisional Standard Draft:** Draft operational definitions of moral good/evil with concrete tests. Has no binding force until a local union votes to adopt it.

- **Legal & Tax Groundwork:** Secure **Bangko Sentral ng Pilipinas (BSP)** Regulatory Sandbox clearance under the *National Payment Systems Act (NPSA)* as an Operator of Payment System (OPS). Secure a **Bureau of Internal Revenue (BIR)** ruling confirming that transparent multilateral obligation netting against verified e-invoices constitutes valid, non-taxable debt settlement.

- **Dense Complementary Core:** Identify and recruit a dense core of **150 to 300 tier-1 and tier-2 SME suppliers** tied directly to **1 to 3 major Philippine conglomerates** (e.g., SM, San Miguel, Ayala, JG Summit, Aboitiz) with overlapping trade obligations.

Phase 1: The First Functioning Closed Trade Union (Year 1)

- **Local Standard Vote:** The union votes on the Phase 0 draft. Departures from the adopted standard apply only when someone knew it, could have followed it, and chose not to.

- **Radical Ledger Transparency & Graph Engine:** Members agree that invoices and corporate obligations are 100% visible on the open ledger. Automated cycle-finding algorithms run across the visible graph to cancel matching circular debt ($A \to B \to C \to D \to A$).

- **Residual Clearing & Mutual Credit:** Integrate with payment rails (**PESONet** / **PhilPaSSplus** / **QR Ph**) or local mutual credit units for residual un-netted balances.

- **Year 1 Target Impact: ~3,000 businesses** (~0.27% of PH establishments) and **~150,000 citizens**. Clears **₱45B to ₱75B PHP** (~$765M to $1.28B USD) in frozen trade credit (**0.15% to 0.25% of GDP**), proving zero moral evil pays inside the group.

Phase 2: Interconnection & Regional Expansion (Year 2)

- **Connecting Unions:** A second union is connected only after local saturation and incentive proof.

- **Scale Across Corporate Supply Chains:** Scale across the top 100 Philippine conglomerates and their extended supplier networks.

- **Year 2 Target Impact: ~55,000 businesses** (~5.0% of establishments) and **~1,750,000 citizens**. Clears **₱450B to ₱660B PHP** (~$7.65B to $11.2B USD) in liquidity savings (**1.5% to 2.2% of GDP**).

Phase 3: Consumer Integration & Macro Clearing (Years 3–5)

- **B2C & Micro-Merchant Integration (Year 3):** Connect sari-sari stores, wet market vendors, and consumers using QR Ph digital receipts and PhilSys verification. A worker's unpaid salary from an SME can net against grocery credit, which nets against distributor invoices in a full B2B2C loop.

- **Year 3 Target Impact: ~220,000 businesses** (20%) and **~11.6M citizens** (10%). Clears **₱1.50T to ₱2.25T PHP** ($25.5B to $38.2B USD), reaching **5.0% to 7.5% of GDP** in liquidity savings.

- **Maximum Sustainable Saturation (Years 4–5):** Secures ~80% of active B2B trade output.

- **Peak Saturation Target Impact: ~440,000 businesses** (40%) and **~34.8M citizens** (30%). Clears **₱3.60T to ₱4.80T PHP** (~$61.2B to $81.6B USD) annually (**12.0% to 16.0% of GDP** in permanent zero-interest working capital unlocked).

Phase 4: Global Federation & Geo-Economic Expansion (Years 6+)

- **Node Replication & Regional Blueprint:** Replicate the proven 6-layer architecture across sovereign jurisdictions by following trade density and supply chain connections. Expansion sequences logically through major geopolitical economic blocs:

    1. **ASEAN & RCEP (Asia-Pacific Anchor):** Scale from Southeast Asia (Vietnam, Indonesia, Malaysia) across the broader Regional Comprehensive Economic Partnership (China, India, Japan, South Korea). Asia holds over **48% of global GDP (PPP)** and controls the world's densest manufacturing and agricultural B2B supply chains, rapidly pushing total network volume toward the critical **30% global trade tipping point**.

    2. **USMCA (North American Corridor):** Bridge Asian manufacturing loops to North American importers (United States, Mexico, Canada), allowing major corporate buyers and retail networks to clear international liabilities without foreign exchange friction or working capital delays.

    3. **European Union & Global Markets:** Expand across the EU single market by integrating directly with existing electronic invoice standards (e.g., Peppol), followed by Latin America, the Middle East, and Africa.

- **Cross-Border Corridor Netting:** Enable automated multilateral obligation clearing across international supply chains (e.g., $Supplier[PH] \rightarrow Manufacturer[VN] \rightarrow Distributor[US] \rightarrow Exporter[PH]$). This eliminates foreign exchange exploitation, correspondent banking fees, delayed letters of credit, and cross-border payment friction.

- **Global Attractor Realization:** As sovereign trade nodes interconnect on the open, transparent ledger, the moral-good network outcompetitively pulls global commerce away from legacy extractive financial systems—fulfilling the global vision through voluntary economic preference, superior liquidity, and zero interest overhead.

5. Leadership, Domain Partnerships & Call to Action

- **Consensus Leadership:** Leaders operate inside the same consensus process as everyone else. Speed comes from execution excellence, not authority to bypass local union votes.

- **Strategic Partnerships:** Partner with world-class domain leaders—such as **Alex and Leila Hormozi** (or equivalent business builders)—to help businesses inside the trade unions build, scale, and deliver high-quality products and services strictly on moral good. Their contribution strengthens the economic foundation of real value creation without acting as a central authority.

- **Cultural & Resource Readiness:** Learn the primary languages and cultures of key domain partners, acquiring the resources necessary to reach them reliably and help them shine.

- **Self-Sustaining Long-Term Revenue:** Long-term funding relies strictly on revenue generated from high-quality trade inside the unions.

- **Asymptotic Attractor Dynamics:** Universal 100% participation is neither required nor forced. By securing 50% of core commercial trade volume, the network becomes the dominant economic attractor—pulling society forward through sheer structural superiority, lower costs, radical transparency, and undeniable human value.

Direct Call to Action

To you reading this: if you feel the same and possess the skills to execute the work outlined in this plan—such as **running or governing community finance, managing fraud and risk, building visible ledger software, or fitting our systems to the regulatory standards of each jurisdiction**—send me a genuine message.

Tell me what you've worked on and which of these hard operational problems you want to take on first.
