

Introduction

I am writing this for myself first and foremost, driven by a vision of the future I'm committed to building fast, on a foundation strong enough to bear the heaviest weight.

My vision is a world order where society advances through high-quality products and services — built strictly on moral good (like honesty, consent, fairness, kindness, and respect), never on moral evil (like deception, exploitation, coercion, theft, or violence).

I have zero worthy achievements that can be found on the internet as proof that I am fit to work on making this vision a reality. But I know I can make it work, alongside a few trusted individuals who share the vision and have the skills and motivation to work on it. I am laying my plans bare to attract capable leaders with an extraordinary sense of responsibility, extraordinary ambition, relentless curiosity, and a genuine concern for where it all leads.

One of my biggest mental frameworks applied to any work I do is: observe what others way ahead of me are doing, take what's useful, throw away everything else, and add what is essentially my own.

For myself, I don't care about money, fame, status, power or anything in between. I care about them only as tools: tools for making this vision real, and tools for the people I care about and work with, if those are things they care about. Tools can be used for moral good or moral evil, and I will only use them for moral good, never moral evil.

More broadly, I'll do everything I need, fast, using only moral good means, to make this vision real and prevent total failure, but never at the cost of who I want to be or the boundaries I've set for my own life. Total failure would only mean that operations are completely shut down and no one is left able to continue them, whether through illegitimate interventions (those that rely on moral evil, such as deception, exploitation, coercion, theft, or violence, as opposed to rules that are open and apply to everyone) from others, human or AI, or through circumstances nobody caused on purpose.

We'll find ways to make sure no person, business, government, AGI, or even ASI can bring us there through illegitimate interventions. We stay wary of claims and such interventions from others and don't let them change our direction, unless what's behind them holds a grain of truth. In that case, we check it honestly, with the same sincere candor we'd expect from anyone else, and we change course if it's true. We deal honestly with everyone we work with, including the institutions whose rules apply to what we build, even when it slows us down, since evading those rules would make us no different from what we're trying to move beyond. If such a rule ever stands in our way, we change our approach, and we don't count that as total failure.

Our aim is to build something better than the current standard, prove it over time, and let people see for themselves that it is better, so that enough of them choose it that it becomes the new standard the world holds itself to, the same way many of the most lasting changes in history have happened: by people choosing something better, not by force.

Let's focus on the work that leads to the vision.

What's the rough plan?

My vision is a world order where society advances through high-quality products and services — built strictly on moral good (like honesty, consent, fairness, kindness, and respect), never on moral evil (like deception, exploitation, coercion, theft, or violence).

The vision is the core. Every pillar, every partnership, and every decision, no matter how small or how urgent, must be true to the vision. Where a choice would make things faster but would require moral evil, even against a single person, the vision comes first.

The vision also has to outlast any one person working on it, including me. No pillar of this plan should ever depend on one leader continuing to lead it.

My rough plan on making the vision a reality is to earn the trust of all businesses and people/AI trading with others, such that we'll offer a standard of trading high-quality products and services — built strictly on moral good, never on moral evil. Anyone can decide whether to follow the standard or not. We'll just make sure that the benefits of this world order are greater than the current world order, so that people can see for themselves that following the standard we offer is better.

This plan rests on three pillars. None of them has to come before another, they support the same structure from different angles. I don't have the right knowledge to build each pillar. I'm just laying out the thoughts I have now, but I'll let others lead who have more proven knowledge and results.

Pillar One

Since money has a deep influence in most people's lives today, this pillar involves making or joining a business/project with a credible path to changing the global monetary order.

I did some extensive research and found Ethan Buchman, CEO of Cycles Protocol SA. In a LinkedIn post he said: "We've got a long road ahead to bring clearing to everyone and reformulate the global monetary order."

Ethan Buchman • 2nd

CEO @ Cycles, Informal Systems. Co-founder @ Cosmos.

4mo •

[+ Follow](#) ...

I've made it my mission to make clearing accessible to all. Cycles is motivated by the realization (after years of study of the history and nature of monetary systems) that clearing is a great super power from which everyone is systematically excluded. I plan to change that, and this fundraising is the first major step.

For years I've been frustrated by the state of thinking about money in our industry, and beyond. Austrian economics is not a sufficient basis on which to build the next generation of money. Neither is MMT, or virtually any other monetary theory. What's missing is a vision of money firmly rooted in the network of balance sheets that constitute the economy. The graph of obligations that makes the world go round. Respect the Graph.

It's no secret that the current monetary order is incoherent, that the Bretton Woods agreement was fundamentally flawed, and that something new must lie on the horizon. But what? We need only turn back to the Bretton Woods conference itself, to the other proposal on the table, to build a multilateral clearing union to balance the international trade graph grounded in a new unit of account, the

bancor.

Cycles mission is to go bottom up where the bancor failed to go top down. Clearing is about doing more with less, about reducing how much money is actually needed to make settlements, about unlocking hidden sources of liquidity and opening new opportunities for growth. That honours the network of obligations in the world. And most importantly, that Respects the Graph!

I'm pumped to be building Cycles with a great team and backed by great investors. We've got a long road ahead to bring clearing to everyone and reformulate the global monetary order. Stay tuned.

Pillar Two

In order to offer a worldwide standard that businesses and people can choose to follow when they trade high-quality products and services — built strictly on moral good, never on moral evil, the business/project I make/join should have a plan to build many small interconnected credit unions that uphold this standard.

Trust has to be built and held locally, by people within each union who actually know the members, not by one central entity. The central entity provides the shared infrastructure: the ledger and the technology connecting unions to each other.

The central entity proposes the definitions for each kind of moral good and moral evil, but they only become the standard once local unions vote to adopt them. A departure from the standard only counts if the person knew it, could have followed it, and chose not to. This isn't ongoing surveillance, it is judgment applied only when a real, specific action calls for it, and that judgment always stays local, with the people who actually know the person involved, never the central entity's call.

The ledger keeps this standard shared: members agree when they join that their standing in the network is visible, so everyone can see who they're trading with and moral evil can't just be hidden by moving to a different union. Changing the standard itself needs the same broad consensus across unions as any other change to how the network works, it can't become any one party's private property, local or central.

New members build trust through people who already know them, and no one's livelihood is put on the line for someone else. Someone with no existing connection builds trust directly with the union, so lacking a relationship costs time, not entry.

Each union works as a closed trading circle from day one, members trade with each other for things they already need, so it can have real value from the start, similar to the circles the WIR Bank in Switzerland has run since 1934 and the Sardex network in Sardinia has run for over a decade.

Growth happens one union at a time, each reaching real local saturation before connecting to a neighboring union where real trade already flows between them, that connection is the actual unit of success, not a global percentage set in advance. As unions prove themselves this way, more people see for themselves that it works and choose to join, the same way credit unions grew from a single one in Quebec into a movement across North America.

Structural incentives, transparency, reputation costs, and real structural checks are designed to make moral evil carry no gain within the system, and to make moral good trading the visible, expected norm. We won't assume this works: each union tests it before connecting to the next, and if moral evil still pays somewhere, we fix that first. Nobody is forced to stay, and nobody is forced to trade with anyone. What changes when someone steps away from the standard is who chooses to trade with them. The goal isn't for people to feel like they're following a rule, it's for the standard to become something they've seen is better and taken on as their own, so natural that it needs no effort, the same way not littering has become close to automatic for many people in Japan over time.

Reputation and credit history stay portable across unions, and the underlying protocol stays open rather than owned by any single company, so the network can't trap people simply by becoming too dominant to leave. The central entity doesn't personally vet every business, it coordinates layered local networks.

I was able to chat with Tomaž Fleischman, Chief Scientist of Cycles Protocol SA, and he said that they have a plan to build many small interconnected credit unions.

Ray Dela Rama ✓ (He/Him) • 4:41 PM

To clarify my question, I understand Cycles is starting with the yield vault option and the signaling of discounts on issued invoices as products.

Will you also include mutual credit as a product/service and build many small, interconnected credit unions in the future?

Tomaž Fleischman ✓ • 4:54 PM

This is a plan.

Ray Dela Rama ✓ (He/Him) • 5:02 PM

| Tomaž: This is a plan.

Okay, great! All the more reason for me to join and help you achieve your goals.

Joining Cycles is a strong option for both the first two pillars at once, since it's already positioned to work on the clearing protocol and this kind of federated trust network together.

Pillar Three

This addresses people who choose not to follow the standard. Some simply disagree with a world order where society advances through high-quality products and services — built strictly on moral good, never on moral evil. They're free to keep trading the way they do now.

For people who genuinely want to do moral evil against others in real life, we'll make a hyper-realistic digital game that has all the components of the current world order.

Entry requires informed consent to the specific terms, not just consent to play a game in general: everyone who joins agrees upfront that moral evil is part of what they're signing up for, and the game only matches people who have accepted those same terms with each other.

The game stays fully sealed off from real-world currency, with no way to convert in-game value into real money or real money into in-game value, so that what happens inside never produces a real financial victim outside it. This is similar to how players in EVE Online accept scams and wars as part of the game's known design before they join, though unlike EVE, no real-money bridge exists here to convert virtual harm into real harm.

This isn't meant to reduce real-world moral evil, that's what the standard in the second pillar is for. It exists only to give people who are set on these behaviors somewhere to act on them without a real victim. Whether the containment holds as intended at scale, meaning no real-world bleed and no erosion of the consent design under pressure, gets tested before this is treated as reliable.

What This Requires

Right now, my own effort is concentrated on the first two pillars, since Cycles is already positioned to work on both. The third pillar needs its own dedicated people to build well, so it starts once there's a team for it, not before.

If I'm not able to join Cycles, partner with them, or use their technology, or if my influence within the project turns out to be limited, I'll build our own business/project instead. It will be similar to Cycles, with the standard and structure this plan describes: the clearing protocol for changing the monetary order, many small interconnected credit unions that uphold the standard, and the sealed containment game once there's a team for it. No part of this plan depends on any one company, just as no pillar depends on any one leader.

Another important thing to mention is making all of these a reality fast on a foundation strong enough to bear the heaviest weight.

For this, I would need to partner with extraordinary capable leaders in their respective domains to help execute all the micro efforts within each pillar that would lead to the vision. These leaders operate within the same consensus process everyone else follows, their speed comes from being excellent at proposing, building, and executing, not from having authority to bypass the local unions' vote.

One candidate is Alex and Leila Hormozi. My idea is to connect the business/project (Cycles, or our own if that doesn't work out) with them, so they can help businesses in the network build and deliver high-quality products and services — built strictly on moral good, never on moral evil. I've consumed 4000+ hours of content from them over the past few years, and I believe they're among the greatest business minds of our generation who truly care about the people they serve, not just money. I don't agree with everything they teach, but I agree with a lot of it. I take what's useful from anyone and leave the rest. If Alex and Leila don't take part, I'll look for other leaders who can play the same role.

Next, in order for me to find and deeply connect on a personal level with these extraordinary capable leaders, I would need two things: one is learn their main language and culture even at just the most basic level, and two is have the resources to reach them reliably and to make them shine in their respective domains.

I believe there are SO many great talents scattered around the world. Some are poor, some are rich, some are powerful, some are not powerful, some are broken inside and helplessly finding someone

who can save them. I believe many of them, whatever their situation, would want a world order where society advances through high-quality products and services — built strictly on moral good, never on moral evil.

Earning as much as we can, while truly caring about people, is how every pillar, small or big, gets built. Money is a tool for the vision and for the people we care about, not a goal in itself. If the two ever pull in different directions, we choose to move a little slower rather than care less. This doesn't mean we stop pushing for the most money possible, it means we get there without cutting corners on care. Grants will help us start the business/project, and they're part of our foundation. But we won't depend on grants or outside investment to let it live, run, and scale. The money for that comes from doing business well, from the revenue of our high-quality products and services. So once we've started, speed depends on our own execution, not on someone else's approval timeline, which is often the actual bottleneck in big plans.

I'm not saying all of these I mentioned above will be easy or that these are set in stone, but these are what I have in mind now. I don't have the answers to everything yet. The hardest problems I expect are keeping the system honest as it grows, protecting the trust inside each union from people who would abuse it, and fitting what we build to the rules of each place we work in. We'll solve them one at a time with the people who join, and we won't grow past what we've proven.

Why do I want to work on this vision?

I'll first talk about my personal reason, then I'll touch on the defensive reason and inspiration reason.

I have many painful experiences that cause the excruciating pain of misery I'm constantly in.

Here are some:

~ When I was six years old, my father left us from the Philippines, went to the US, and didn't come back. Later on, we found out he's with another woman already. Our family is not well-off, so we assume one reason he betrayed us is because of money.

~ Growing up, I followed my mom's advice to do well in school and graduate with honors so that "I'll be able to get a high-paying job". I did graduate with honors but all the entry-level jobs in the Philippines were low-paying. We didn't have the idea of me getting work overseas. All my skills were optimized on "graduating with honors", not on "getting a high-paying job". Later on, I understood from my business mentors that schools are businesses themselves. Many of them operate to maximize profits, and put up a facade to care about students and teachers, but in reality, they only care about money, not people.

~ In my job as a structural engineer, my boss talked to me in private forcing me to just let the failed structure seem like it passes so that we can submit the long-overdue project and get paid. He said he would be the one to take the blame if ever something bad happens to the structure once built. He only cared about the money, not the people who would die if the structure actually fails.

~ I've had four different digital freelancing jobs that collectively were paying me 20x of my one engineering job. To keep the story short, despite being in different industries and different places around the world, all of them only cared about the money, not their employees and not the people they're serving.

~ My mom decided to get our first house built by a contractor she personally knew. I trusted my mom with her judgement and didn't bother prying into the specifics of her deal with the contractor because I was busy working 4 jobs. Later on, we found out that the contractor was a fraud and he disappeared one day when he got full payment, without even finishing the home.

One recurring theme in these five experiences was that many people only care about money, not others. Many people only care about themselves and their loved ones, not others. I realized this is how money influenced and set the norms of society. Money, fame, status, and power aren't evil in themselves. They're tools, and the problem is people who use them for moral evil, or who care about them more than they care about people. It's scary to think that as society progresses, more and more people would care only about money tied with fame, status, power or anything in between. I don't want this to happen.

This might sound extremely selfish.. but it's best for me to be honest.

The reason I want to work on this vision is to save myself from this aching feeling of misery.

I hate that everywhere I worked, my colleagues and/or boss only cared about money and it's okay for others to fall just so that they could rise.

I hate that everywhere I go, there are people who are rude to low-paid kind workers but respectful to high-paid arrogant workers.

I hate that the government system, the work system, the school system, and all other global systems favor the ones who make the most money regardless if they're doing moral evil to others.

I hate that when I tried to ignore all of these and just lived my life, I felt empty.

I tried working jobs that paid very low, and jobs that paid very high, but none of them made me happy.

I went on vacations with my friends or with my mom, but I didn't feel happy.

Every single day, It's like I'm alive.. but I don't feel like I'm living.

I hate this aching feeling of misery knowing that I can't change the way things are with the world because so much of the current system, and the people who benefit most from it, work to keep things as they are.

I want to change the world fast, and maybe as I'm doing the work, this feeling of misery would slowly lower, one union at a time, as more places uphold the standard of building high-quality products and services strictly on moral good, never on moral evil.

This is my personal reason.

As for the defensive reason of why it's useful for humans and the society, having everyone choose to uphold the new standard meaningfully lowers the chances of humanity getting wiped out.

Think about it. If the norm everywhere in the world is to only do moral good, never moral evil, wouldn't that at least remove one contributing factor in whether AI trained on human data ends up misaligned with us? I know the leading argument in AI safety research says the bigger risk isn't what an AI has seen, it's that a sufficiently capable, goal-pursuing system can discover deception or self-preservation as useful strategies on its own, regardless of its training data, so this isn't a guaranteed fix, and I won't pretend it is. But a world that treats moral evil as never an option in its own data is still one less thing feeding whatever an AI learns from us, even if it's not the main lever.

Think about it. If the norm everywhere in the world is to only do moral good, never moral evil, wouldn't there likely be far fewer humans who'd want to see the human race wiped out? The painful experiences that many humans harbor in their hearts because of other people's moral evil is a real source of motivation for some to want to take revenge by killing us all. Grief, despair, or hopelessness unrelated to anyone's moral evil could still push a small number of people toward wanting humanity gone, but removing a major, active source of grievance should still meaningfully lower how many people end up there.

Even if humans become a multi-planetary species and inhabit all planets possible, that wouldn't remove the risk that comes from moral evil. As long as moral evil is still accepted in any way, shape, or form, the chances of humanity getting wiped out are higher than if there is no moral evil.

To be clear, moral evil causes suffering because someone else chose to do them. While natural evil is suffering that comes from the world itself, not from anyone's bad choices (like natural death, natural disasters, scarcity, physical limits, grief, unrequited love, honest failure).

They say the path to wisdom is attained only through struggle, pain, failure, so on and so forth. If there is no moral evil being done in the world, humans, AI, and robots can still get a lot of wisdom and learning from the struggle, pain, and failure from natural evil.

So, the defensive reason is that upholding a standard of moral good, never moral evil, improves the probable lifespan of civilization.

Next, the one I find, personally, that drives me more is actually the inspiration reason. Because life cannot just be about solving one sad problem after another. There must also be things that make you excited to wake up in the morning. That makes you look forward to the future. That makes life worth living.

Everyone doing only moral good, never moral evil, enables everyone to constantly experience this great feeling, no matter what they want to do.

Right now, there are billions of people who don't experience this feeling, which is largely caused by the ripple effects of the moral evil that people do.

The inspiration reason to work on making the vision a reality is to free everyone from the ripple effects of moral evil, so that doing moral good is finally enough to make their life worth living.

I know the journey to this goal will be very hard, and I know there are many risks I'm gonna need to take, and there's only one message I need to continuously remind myself: "Never give up."

I'll live as long as humanly possible to make my vision a reality and uphold it for an extended period of time so that people all over the world would accept and embrace it as the new better norm than the current one.

As long as we never give up and do things fast while staying true to the vision, I believe we'll get what we want while we're alive.

Want to know more about me?

This section is miscellaneous and would probably have added information in the next few years as I'm working on the vision.

Note that the information written here is just a tiny speck of myself.

This means that you cannot expect that what's written here or anything you can find on the internet is the full me.

The only one who can fully understand myself is me.

Unless I have personally stated something in person or on the internet, don't believe in what you see or hear from others about me.

Get to know me personally on a genuine deep level first, and then draw your conclusion.

Okay, let's start.

I grew up from a not so well-off family in the Philippines. I was taught to follow what the majority has done: study hard, get high grades, graduate with honors – to land a high-paying job.

I did these, but I didn't get a high-paying job, not even a job I'd be proud to work in.

Then the covid pandemic came, together with a few more painful experiences I mentioned in the previous section.

All my painful experiences made me think more deeply on why the world is like this.

It took me several years to realize how the real world works. I don't mean that I know everything. I just mean there's a lot most people never get access to, information the people who benefit from things staying the same have little reason to share.

One of my first realizations was from a guy named Alex Hormozi. He's known to be a business person, but the first content I saw from him was philosophical, then the next thing was psychological.

I was simply amazed.

All my life, I only thought that there's only one side to a domain. If I studied structural engineering, I thought it's all only about structural engineering. But there's so much more to it. There's a philosophical side to it, psychological, behavioral, finance, so on and so forth.

In Rick Rubin's words:

"I think that creativity is beaten out of us over the course of our lives. We go to school, we're told to repeat back what we're told. We're told to sit in a chair all day. Our spirits are broken by institutions.

We're not taught to be free creative thinkers. We're taught to follow rules. The rules are not there to help us. The rules are there to control us.

I'm suggesting we break free and be free and express ourselves freely. And that's our purpose here on the planet. To express ourselves freely. That's why we're here."

This is about creative conformity, breaking free of the rules that flatten how you think and create. It's not about dealing honestly with the institutions we work with, which I addressed earlier. Those are two different things.

From my first realization from Alex Hormozi, I've learned to take in a lot of information from many different people way ahead of me in the thing I want to do, but I also learned to not ever listen to what anyone tells me to do. I just observe what others way ahead of me are doing, take what's useful, throw away everything else, and add what is essentially my own.

With these as my core knowledge, I choose to do what's good for me first and foremost. This is what I meant earlier by never compromising who I want to be or the boundaries I've set for my own life. What's good for me is the work that leads to the vision, so that is my only priority. Everything else is either a boundary or a bonus.

My boundaries are my family, eating great food, and exercising. Wherever the work takes me, my family comes too, and I won't leave the people I care about behind for the sake of the vision. In the same way, I won't give up eating great food or exercising for the sake of the vision.

The following are not priorities or boundaries, just added bonuses: digital gaming, watching anime, reading manga/manhwa/manhua, and traveling around the world with the people I care about while experiencing high-quality products and services.

For myself, I don't need money, fame, status, or power, but I care about what the people I care about, and the people I work with, care about. If they want money, fame, status, power, or anything in between, I'll do everything I can to help them get it, as long as they use it for moral good, never moral evil. If I find out they're using it for moral evil, I stop helping, after checking honestly that it's true.

What I need most for the work is people who believe in the vision, have the skills to execute it fast, and who I genuinely like working with. If that's met, I'm all good. I won't work with people I don't like, no matter how capable they are. That doesn't change who the vision is for, only who I choose to build it with day to day.

I understand that my vision involves ALL the people in the world, and I understand people should be free to do what they want. That's why my rough plan talks about how to deal with both people who want to do moral good, people who want to do moral evil, and everyone else in between.

My motivations

Apart from the personal, defensive, and inspiration reasons I mentioned before, here are my other motivations in no particular order:

I want to make my mom happy before she dies. She said that the biggest thing that'll make her happy is to see me succeed and do things that make me happy.

I've explained before that I've tried many things but none of them have made me constantly feel happy.

I think the answer is a combination of work and relationships. Specifically, work worth working, and genuine relationships built on moral good, not moral evil.

I believe that as I'm working on the big vision, I'll meet likeminded people who want to do good to the whole world, not just to a small community.

What my mom actually wants is to see me succeed and be happy, and that is one part of the reason why I want to build this fast (while having a strong foundation). But I also want to give her something real, not because I owe it to her, she never asked for anything back, but because of how much she's given me without ever expecting it returned. For now, one of my short-term goals is to give her \$500k to spend for herself. This money isn't for me. It's something I can give her, and I trust her to spend it on moral good, never moral evil.

Next, I've come to understand that motivation is the opposite of deprivation, at least in part. We're more motivated to eat if we're deprived of eating. We're more motivated to sleep if we're deprived of sleeping. This isn't the whole story of what drives people, curiosity and novelty pull on us even without deprivation behind them, but the deprivation side of it is the part I feel most directly.

All my life, I'm deprived of seeing people do moral good genuinely.

So much of my experiences in any place I go and any nationality I've interacted with, it has felt like there are more people doing moral evil than moral good, regardless of their wealth, status, fame, or other social markers.

My hypothesis is that one big reason why people choose moral evil knowingly, unknowingly, or unintentionally is because of the pain and suffering they got from others who did moral evil.

The act of moral evil can have a ripple effect just like the act of moral good.

Quantitatively, moral good happens exponentially more often than moral evil. However, moral evil possesses a disproportionate structural weight wherein a single act can echo across generations, making it *feel* as though evil dominates the world.

All my life, I've experienced so much of the damage from these moral evil ripples that I feel so empty.

It feels like I've lived for thirty thousand years. It's like I've lived life after life, constantly being reborn, all the way to now. Each rebirth is a search for a place to belong. When I finally come across a place that

feels like home, I still know deep down that it isn't where I truly belong. So I set off again, carrying that longing, and am reborn once more.

What does it take to break this cycle?

In this world, I believe leaving nothing to regret is the only way out of the cycle, so I'm no longer reborn, meaning I live this life so fully that I'm no longer searching for somewhere else to belong.

Working on this big vision is the only thing now that would not make me regret this life.

Next, even if money wouldn't matter anymore because AI and robots outpopulate humans and become more capable of making high-quality products and services faster than humans, this doesn't ensure that the world order would be built only on moral good, never on moral evil.

Aren't every one of us human beings?

Between people, shouldn't there be at least some basic moral good shown and lived at every age at any place in the world?

Shouldn't everyone get the chance to see for themselves that doing moral evil does extreme damage to people and the society, so that doing moral good becomes their own standard for every act?

This is what I want to work on.

Before, I really didn't like all the power struggles at any level in society.

But now I see it differently.

That was just me running away.

I have to fight for the life I want.

So this time, I'm giving it my all.

I'm fighting for myself first, and for the people I care about, and for everyone this vision is for. So that when I make the vision a reality, moral evil becomes rare enough, and easy enough to handle, that it no longer runs my life, even on the days it still crosses my path.

To you reading this, if you feel the same and you have the skills to do the work I said in the rough plan, such as running or governing community finance, fraud and risk, ledger software, or fitting what we build to the rules of each place we work in, send me a genuine message to help.

Tell me what you've worked on and which of the hard problems above you'd want to take on first. You can reach me at raymond [dot] delarama55 [at] gmail
